

HIGHLIGHTS

- ✓ REDUCES DEBRIS ACCUMULATION
- ✓ INCREASES LIGHT TRANSMISSION
- ✓ EXTENSIVE INVENTORY
- ✓ IMPERIAL SIZING

BLAST PLANKS

Blast Planks are designed and manufactured for the ship building industry, where large area scaffolds with multiple plank levels are required to grit blast and re-coat a large surface area; where you want to avoid debris accumulation associated with grit blasting operations.

FEATURES

- Sealed channels on all rails to prevent debris from becoming lodged in the traditional S-Hook style planks
- Fits in a standard configuration with traditional S-Hook planks
- Similar in weight and capacity per plank as compared to traditional S-Hook planks
- A mesh-style finish to allow airflow between plank levels when installed
- Provides venting and air circulation between plank levels on traditional tall scaffolds with multiple plank levels
- Increases light transmission between plank levels in confined spaces (power generation boilers)
